

ReplicAlive Care Instructions

Dear customer,

Thank you for purchasing NUMED ReplicAlive items. These replicas are 3-D models handmade by NUMED. Handling them carefully, avoiding puncturing and excessive tearing and following the below instructions will ensure many years of excellent quality.

Storing

The best way to protect replicas is to store them individually in closed plastic bags in a cool, dry place when not in use. Do not allow replicas to come into contact with any type of ink, pigment, painted or printed materials or other colored items as they will absorb color which will cause permanent discoloring damage to the surface. Avoid exposure to extreme heat and direct sunlight.

Cleaning

When needed, clean replicas with a damp cloth. Do not use detergents or acidic cleaners. With time a thin oily layer might build up on the surface of the replica: use clean water with a small amount of soap to gently clean the surface. Avoid soaking in water and other liquids.

Repair

Minor tears might occur in the replica. These could be fixed with common plastic glues.

Material safety and handling

These replicas are made of plastic that is kid-safe and FDA-approved. All material used for manufacturing (molding, painting, etc.) are FDA approved and kid-safe as well.

CAUTION: These replicas are for educational purposes only. They are not edible and should not be left with unsupervised children.
